Project Description:

Retail inventory management is the process of ensuring you carry merchandise that shoppers want, with neither too little nor too much on hand. By managing inventory, retailers meet customer demand without running out of stock or carrying excess supply.

In practice, effective retail inventory management results in lower costs and a better understanding of sales patterns. Retail inventory management tools and methods give retailers more information on which to run their businesses. Applications have been developed to help retailers track and manage stocks related to their own products. The System will ask retailers to create their accounts by providing essential details. Retailers can access their accounts by logging into the application.

Once retailers successfully log in to the application they can update their inventory details, also users will be able to add new stock by submitting essential details related to the stock. They can view details of the current inventory. The System will automatically send an email alert to the retailers if there is no stock found in their accounts. So that they can order new stock.

Inventory control is associated with planning, procuring, storing and offering the suitable material of proper quality, proper amount at proper vicinity with the intention to co- ordinate and agenda the manufacturing pastime in an integrative manner for a commercial undertaking.

Inventory Management truly is the technique by which a company is provided with the products and offerings that it wishes to obtain its goals of buying, storing and motion of materials. The fundamental goal of the have a look at is to figuring out the elements that have an effect on the stock of material, the statistics and reviews of stock control and management on the age of production enterprise might be analyzed and to create a powerful usage of stock at enterprise, to triumph over the problems via means of giving viable recommendations.

2. RESEARCH PAPER ON INVENTORY MANAGEMENT SYSTEM

PUNAM KHOBRADE, ROSHNI SELOKAR, RINA MARASKOLHE, PROF.MANJUSHA TALMALE
PUBLISHED 2018

Inventory Management System is software which is helpful for the businesses that operate hardware stores, where the store owner keeps the records of sales and purchase. Mismanaged inventory means disappointed customers, too much cash tied up in warehouses and slower sales.

This project eliminates the paperwork, human faults, manual delay and speed up process. Inventory Management System will have the ability to track sales and available inventory, telling a store owner when it's time to reorder and how much to purchase. Inventory Management System is a windows application developed for Windows operating systems which focused in the area of Inventory control and generated the various required reports.

Inventory are often outlined because the ad of the worth of raw materials, fuels and lubricants, spare elements, maintenance materials, semi-finished merchandise and finished product that square measure offered at a given time.

5. INVENTORY MANAGEMENT SYSTEM

PUBLISHED 2018 - 2019

Inventory management system is an application which is helpful for business operations. Inventory Management is a challenging problem area in supply chain management. Companies need to have inventories in warehouses in order to fulfill customer demand, meanwhile these inventories have holding costs and this is a frozen fund that can be lost. Therefore, the task of inventory management is to find the quantity of inventories that will fulfill the demand, avoiding overstocks.

This paper presents a case study for the assembling company on inventory management. It is proposed to use inventory management in order to decrease stock levels and to apply an agent system for automation of inventory management processes. Inventory management system (IMS) used for a departmental store.

This system can be used to store the details of the inventory based on the sale details, generate sale and inventory report periodically etc. this is one integrated system that contains both the user component(used by sales persons , sales managers inventory managers) and the admin component (used by the administrators for performing admin level function such as adding new item to the inventory) etc.

6. CASE STUDY ON AN ANDROID APP FOR INVENTORY MANAGEMENT SYSTEM WITH SALES PREDICTION FOR LOCAL SHOPKEEPERS IN INDIA

PUBLISHED IN: 2020 6TH INTERNATIONAL CONFERENCE ON ADVANCED COMPUTING AND COMMUNICATION SYSTEMS (ICACCS)

The retail sector has widely adapted different inventory management applications and some retail chains even employ prediction software to analyze future sales. However, a lot of day-to-day shopping in India happens through local shops. The owners of such mom-and-pop shops do not necessarily have the capital to invest in proprietary applications for setting up an inventory management system. Needless to say that same is the case for any sales prediction software. As a result, many of the shopkeepers end up hoarding a lot of irrelevant and nonprofitable products that lead to financial losses.

A very cost-effective and accessible solution for this problem is a mobile application that provides all the features of a point-of-sale system as well as gives future sales insights. It will enable shopkeepers to manage their current product purchases and invoicing. The predictive sales analysis will help them to modify their investments on products and supplies thereby ensuring maximum profits. If a shop houses relevant products that cater to customer needs, its customer reach will increase.

7. A STUDY ON INVENTORY MANAGEMENT

B. ARCHANA, K.DIVYA 1MBA STUDENT,
ASSISTANT PROFESSOR DEPARTMENT OF MBA
OCT /2019

Inventory Management System is important to ensure quality control in businesses that handle transactions revolving around consumer goods. Without proper inventory control, a large retail store may run out of stock on an important item. A good Inventory Management System will alert the retailer when it is time to reorder. Inventory Management System is also an important means of automatically tracking large shipments.

For example, if a business orders ten pairs of socks for retail resale, but only receives nine pairs, this will be obvious upon inspecting the contents of the package, and error is not likely. On the other hand, say a wholesaler orders 100,000 pairs of socks and 10,000 are missing. Manually counting each pair of socks is likely to result in error. An automated Inventory Management System helps to minimize the risk of error. In retail stores, an Inventory Management System also helps track theft of retail merchandise, providing valuable information about store profits and the need for theft-prevention systems. Automated Inventory Management System works by scanning a barcode either on the item. A barcode scanner is used to read the barcode, and the information encoded by the barcode is read by the machine. This information is then tracked by a central computer system.

A STUDY OF INVENTORY MANAGEMENT SYSTEM IN CONSTRUCTION INDUSTRY

Inventory management systems involve procurement, storage, identification, retrieval, transport and construction methods. Each is indelibly linked to safety, productivity and schedule performance. The main objective of Our study is to analyze the inventory management control adopted and the effective utilization of inventory at the construction site. ABC analysis is one of the conventionally used approaches to classify the inventories and the case study of a company is collected.

The tracking and locating of materials in construction jobsites has increased a great concern among construction entities. The improper handling and storage of materials in construction sites has made it difficult to track and locate materials when they are needed. These findings may reflect the main factors that will affect the inventory management system which is able to achieve the improved efficiency of project management and to reduce the waste of materials in the respective region of construction industries.
